

McIntosh C35 System Control Center

- Sophisticated-Versatile-Complete System IR Remote Control Preamplifier
- Hand held IR Remote Controller provides selection from 9 sources, 2 speakers, 2 tape recorders or the audio from VCR's, system mute, and volume adjustment
- A specially designed low noise switching system for excellent source-to-source isolation, lower distortion, and freedom from hum, noise, and interference from high-power TV and radar signals
- Electronic tape monitor or copy switches for two audio tape recorders, or the audio from two video recorders
- Volume is adjusted by a motor driven precision attenuator. Volume level is displayed by LED's as a percentage of total volume to permit precise repeatable volume settings
- SPEAKER buttons select both or either of two sets of loudspeakers (when used with the optional SCR3 speaker control relay)
- With McIntosh R607 Remote Sensor, remote control can be extended to two additional listening areas.
- An active circuit loudness control is electrically independent of the volume control
- A five-band program equalizer permits the adjustment and improvement of the loudness contrast of the five most important frequency ranges
- A built-in headphone amplifier provides power to the front panel headphone
